

Did you know that the ISO6789 Standard which defines torque wrench calibrations has been updated?

The standard is now split into 2 Parts. Norbar is able to comply with both parts of the standard.

Part 1 – Torque wrenches will be supplied with a Declaration of Conformance.

Part 2 – Torque wrenches will be supplied with a Calibration Certificate (defines the accuracy uncertainties of the wrench in more detail).

All companies should check with their Quality documentation to ensure that they are getting the certification required for their business. For support and enquires, [contact :](#)
